

Micro-Armor 2000 Automatic Transmission and Oil Treatment

Product Description

Micro-Armor 2000 is a unique lubricant additive designed to enhance the performance of petroleum-base and synthetic lubricants far beyond any known competitor today. This product is a highly refined, formulated additive product designed to protect gear oils so that heat is reduced and sludge buildup and oil breakdown is avoided. The end result is that Micro-Armor 2000 protects your equipment, and investment, from expensive downtime and excessive maintenance.

Benefits

- Reduces friction
- Reduces operating temperatures
- Increases operating torque
- Reduces wear on all metal components
- Reduces Oxidation of gear oil system
- Dramatically extends equipment life-cycle

Application Areas

- Automatic Power Shift Transmission
- Hydraulic Systems
- Pumps
- Gearboxes with wet clutches
- Reduction Gearboxes

Application Procedures

Automatic Transmissions: Add 2 ounces of additive per quart of treated oil (8 ounces of additive per gallon of treated oil).

Hydraulic Systems: Add 2 ounces of additive per quart of treated oil (8 ounces of additive per gallon of treated oil).

Pumps and Dearboxes: Add 2 ounces of additive per quart of treated oil (8 ounces of additive per gallon of treated oil).
